

DOXEM® PRECISE

Dry Flowable Pest Control

powered by Indoxacarb

BLU Pest Solutions is a locally owned and operated pest control company in Dayton, Ohio. The owner, Troy Brown strives to be different than the “typical” pest control service.

Brown has spent well over a decade in the pest control industry and beyond his required state licensing, he has been a member of many trade organizations such as FPMO (past Vice President), OPMA, NPMA, and The Central Ohio Bed Bug Task Force just to name a

few. Brown states proudly, “While I have learned a lot from my various mentors and peers, I feel like the work and experience I received during my tenure as President of an established Columbus, Ohio based pest control operation has prepared and qualified me to solve any pest control needs.” Don’t let the term “President” fool you. He is very much a lead by example person, and could be found in a work truck as much as in the office.

Brown describes himself as a techie and fondly admits that he is an early-adapter when it comes to new technology, especially in the Professional Pest Control Industry, which he loves. So when the Precision Delivery System (PDS) launched, he had to have it. He has been very pleased, he thinks he has every “new” gadget out in the last few years. Often times, they end up in storage because they stop working or are difficult to use. Not the PDS, it works just as intended, is compact and looks professional. Brown says, “The PDS aligns with our branding, to be different and more technologically savvy. We added it to our rotation of products in a senior high-rise and it did a great job.” He especially likes the “surgical” way it applies Doxem® Precise, the dry flowable product that is used with PDS.

“We love the look of the PDS. Customers cringe when they see you bringing out a large tank sprayer. It makes them worry about their families and pets. Bringing out the PDS makes them less alarmed. It’s a great talking point about how the industry is moving forward. We love being the company with the cutting edge technology!”
