

TAURUS® DRY

Termite Control

powered by Fipronil

Since 1969, Owner "Ed Assidio" has inspected and treated well over 16,000 homes and businesses in his career. Given his five plus decades of dedicated service and experience, thousands of his customers have entrusted Assidio to protect their homes against termites and carpenter ants. In 1980, Mr. Assidio formed North Jersey Termite & Pest Control, Inc. From 1980 to present, he has successfully treated many thousands of homes and businesses in the North Jersey area. State Licensed, Ed Assidio brings a great deal of knowledge and expertise in the control of wood destroying insects.

Assidio started using the Precision Delivery System (PDS) and Taurus Dry soon after it was launched in January 2021. After using PDS with Taurus Dry, he realized that he really liked everything about the PDS system. In particular, the applicator gun and flex straws. He appreciates the ease of use, ultra low dose applications as well as the PDS' flexibility for wall voids treatments, interior slab cracks, and direct application to mud tubes and infested wood members.

With his over 50 years of experience, Assidio explains, "Where Taurus Dry shines is its ability to quickly and effectively eliminate termites in problem areas that are not easily treatable or accessible by other treatment methods. It is indeed a valuable tool for any industry professional."

Assidio describes a recent job he did, "I used Taurus dry with the Precision Delivery System on a interior wall and ceiling void that were covered by sheet rock.

Taurus Dry on floor joists in conjugation with a conventional liquid/soil application treatment. Active termite tubes were observed in the basement and Taurus Dry was delivered into the termite mud tubes and infested joists via drilling.

Termites were swarming on the main level as well as in the basement beneath. A Bora-Scope inspection was made prior to the application to determine both the exact location and access the severity of the infestation. Next, holes were drilled through the sheet rock and Taurus Dry was injected via the PDS into these wall and ceiling cavities. This treatment method was superior to a foam application and had the added benefit of achieving a targeted application directly on the infested areas in question."

"We are just starting our termite season here in New Jersey, and I hope to use a ton of the Taurus Dry. Initial results have been most impressive!" Assidio stated.

"Where Taurus Dry shines is its ability to quickly and effectively eliminate termites in problem areas that are not easily treatable or accessible by other treatment methods."
