

BEST PRACTICES

TAURUS SC

Taurus SC is a suspension concentrate (SC) formulation. SC formulations are solid active ingredient(s) milled to a very small size and dispersed in water or other solvents. Over time, the solids in the formulation can settle to the bottom of the bottle. This does not indicate that it's a substandard formulation, or that an application of the product will not be effective. To regain the suspension, shaking is necessary. Follow these steps to re-incorporate the solids in the suspension:

1. Be sure both caps are securely tightened.
2. Grab the bottle with both hands and turn the bottle upside-down then bring the bottle to upright position. Do this vigorously for 15-20 seconds.
3. While turning the bottle upside down and right side up, simultaneously shake the bottle.
4. After this, the formulation should look milky white and be fully mixed.
5. If layers of solids are still visible when the bottle is turned upside down, repeat this process until a fully mixed product is achieved. Fine solids should not remain on the bottom of the bottle.
6. After shaking, use as directed on the product label.

**SHAKE
WELL!**

Before and after 15 seconds of shaking.
