My recommended **FUNGICIDE PROGRAM**

Quali-Pro recommends a preventative approach to effectively manage turf pathogens and maintain optimal course conditions.

The proposed Quali-Pro fungicide program consists of a rotation of proven fungicides with different modes of action to reduce the likelihood of resistance development in pathogens. This approach will ensure broad-spectrum protection against common turf diseases, such as anthracnose, dollar spot, leaf spot, fairy ring, and pythium blight while promoting healthy turf growth and playability. By planning ahead and adhering to a regular application schedule along with closely monitoring weather conditions, the golf course will benefit from improved disease resistance and enhanced overall playing experience for your valued members and guests.

The fungicide program recommended by Quali-Pro for your specific geographic location is a reliable and cost-effective solution to safeguard the golf course's turf health and vitality. Implementing this program will lead to a resilient course that will elevate its reputation and reduce the need for emergency type of applications.

As your trusted partner, I am eager to assist in tailoring the program to meet the specific needs and challenges of your golf course, ensuring long-term success and thriving turf conditions.
