

PHASE OUT FLIES

TEKKO FLY G

LARVICIDE

Tekko Fly G is a granular larvicide for the control of fly larvae.

Features & Benefits of using TEKKO FLY G

- Convenient application
- 1 lb. treats 200 sq. ft. for poultry operations
- ½ lb. treats 200 sq. ft. for cattle operations

How it Works

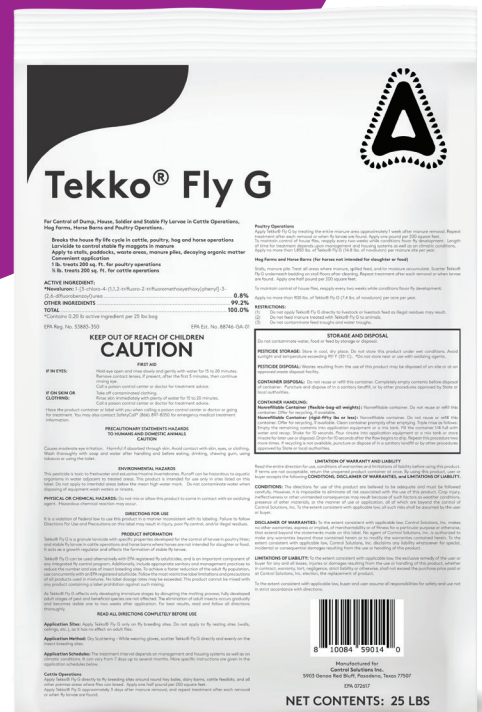

• Novaluron is a Chitin Synthesis Inhibitor. It prevents the formation of a new exoskeleton.

Insects Controlled

House, Stable, Dump and Soldier fly larvae developing in manure and other moist, decaying organic materials. It kills developing larvae of these fly species in their larval habitats before they can develop into adult flies.

Use sites

Poultry, cattle, swine and equine operations. Apply to stalls, paddocks, waste areas, manure piles, decaying organic matter.

Active Ingredient

• 0.8% Novaluron

Packaging

• 25 Pound Bag
